

CutBuddy

Installation Guide

CutBuddy takes all outlines in the document and puts them in a new layer with the right spot color for the wanted tool.

For now it has the options CutContour, CutContour Cut Out Knife and Cut Contour Kiss Cutting Knife. These are names used by Summa for its S- and F-Series.

Feel free to use CutBuddy as it pleases you.

I would love to hear what you use CutBuddy for and how you upgrade it!

English

Semi-automatic Installation:

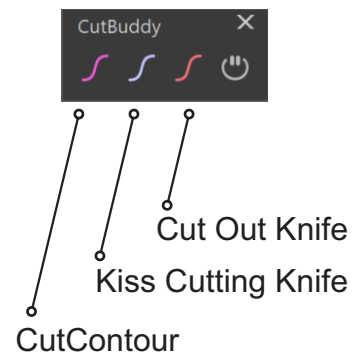

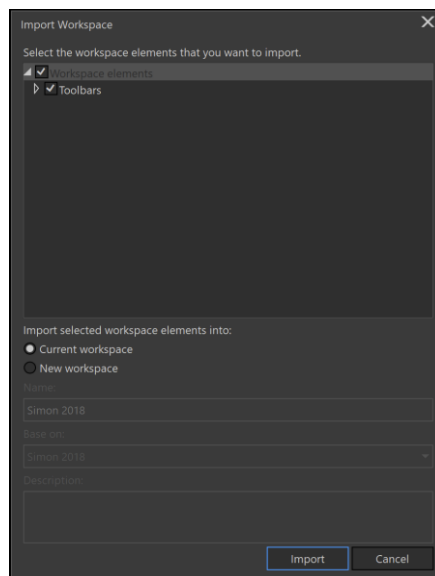

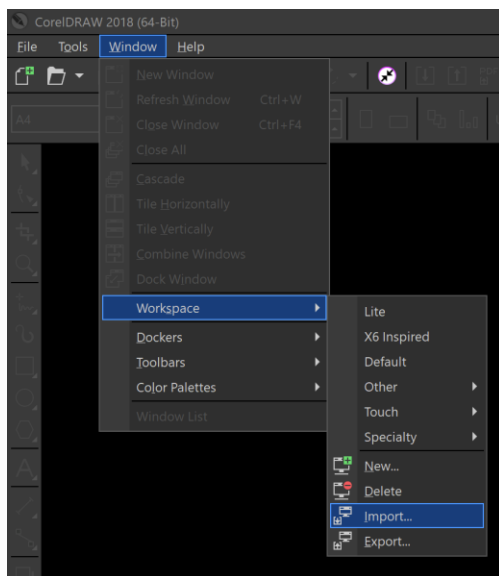

Open CutBuddy installer.bat

It puts the program in the right folder. If you're lucky... :-)

Install CutBuddy workspace in CorelDRAW.

In the top menu select Window/Workspace/Import

Choose CutBuddy.cdws and import.

Manual install:

Put the GMS file (CutBuddy_V1.2) in the GMS folder:

%APPDATA%\Corel\CorelDRAW Graphics Suite 2018\Draw\GMS

If no GMS folder exists, create one.
