

Tools we need in CorelDRAW

Add Power, to the powerful Draw program!

1

Bevel Tool to provide

According to all Graphic Programs today, the Bevel tool in CorelDRAW is very outdated. Please add more Power and Effectivity, how to control the effect of the Bevel tool.

2

Productive Vector Effects

In CorelDRAW, there is a wide range of nice Bitmap Effects we can easily add to any vector and drawing (added in 2019), but there is a big limitation when it comes to nice “Vector” effects, when we want to add some live to a Text or Object.

Please add the following Effects, that the CorelDRAW users should have the apetoony to provide nice effects that all graphic Programs haves today (take a look in Adobe Illustrator or in Affinity Designer)

- **Outer shadow**
- **Inner shadow**
- **Outer glow**
- **Inner glow**
- **3D**
- **Gradient Overlay**

3

More Corner and Outline styles

Please add more Corner Options, Double Line Options, and more Outline Styles, to give us a bigger creation when designing Posters and Magazines.

4

Place PDF option

Allow to place a PDF file in a drawing as one big closed object (like its possible in AI and INDD).

5

More Page Layout options

- Horizontal and vertical alignment of text
- Shear and Skew

Tools we need in CorelDRAW

- **Numbered Bulletes & Alphabets**
- **Underline and Striketrough color change**
- Primary text frame
- footnotes
- Break columns

6

Please add a Tint Slider

In CorelDRAW its very easy to apply "Transparency" to any object, but we need also a option just for "Tint" (to lighten and darken the color, without Transparent background) like i see in other graphic applications. So, please ad a "Tint Slider", to give the ability to apply how Dark \ Light the color should be

7

Globel Edit

- Global change by its object type, object color, font type
- Powerclip edit: Give this as global command to open, lock, unlock, extract. so that user easily scale or rotate the power clip at once despite of to select each and

every powerclip and to use the command lock contents to powerclip.

- Select by object type, object color, object size
- Delete by object type, object color, object size

6

More prime Requests

- Different line stroke thickness on a single line (can set every node stroke thickness), for example on Paint Tool SAI, it will be very helpfull for example to create character with more natural stroke, or creating a manga or an anime styled character.
- Font names in the object manager - when converted to curves, Using this feature, user knows what font is converted before it was used. (same when opening a PDF file with the Text like Curves)
